Cole's Flowering Trees

As a class, these are small growing trees, often thought of as large shrubs. They are among the most spectacular and showy plants for individual specimen landscape work, for deep border or background planting, and as accents around the foundation. Professional landscape architects favor this class of material because of the freedom and artistic accomplishment. The plants are densely and gorgeously flowered from every standpoint. Especially noted for foliage flowers and fruits. Truly the aristocrats of the plant world.
